

ACCESSING OUTLOOK WITH OKTA

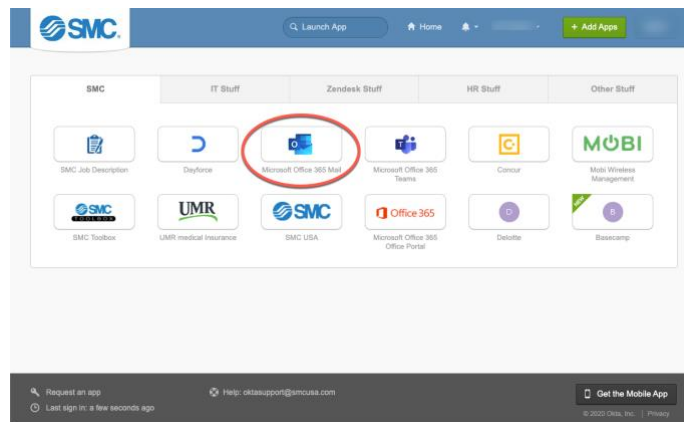

SMC uses Okta to achieve Single Sign-On (SSO) with some applications and to assist with password management across a multitude of websites. Most of you should be familiar with Okta and how it works. If not, here is a refresher.

Point your browser at <https://1smc.okta.com>; you will see the prompt below.

This login prompt requires your Network (VDI) username and password.

From here you see your Okta workspace with application chicklets (icons). Each of these chicklets launches a website. You can also use the search box at the top of the screen to locate the application.

If you do not know your username or password, contact the Support Desk at Ext 2000 or 317-688-0050 or support@1smc.com.

If you are logging in for the first time, this article provides an overview of this profile setup process.
